DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Claims 1-9**, drawn to an alignment device, classified in class 356, subclass 399.
 - II. **Claims 10-24**, drawn to a system for tracking a trajectory of an object relative to a target area and a positioning and alignment system, classified in class 356, subclass 138.
2. **Inventions II and I** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system for tracking a trajectory of an object relative to a target area and a positioning and alignment system does not need the particular first and second transmitters, first and second receivers, and indicator of the alignment device. The subcombination has separate utility such as in an exposure apparatus for a semiconductor wafer.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
